### **Recommendations on the Treatment and Prevention of Uroliths in Dogs and Cats: Practitioner's point of view**

In this webinar, the speaker will review of the ACVIM Consensus statement on treatment and prevention of uroliths with highlights & tips that can be used in every-day practice. The audience will learn the consensus-derived, research and experience-supported, patient-centered recommendations for the treatment and prevention of uroliths in dogs and cats utilizing contemporary strategies.

### **Nutrition can help to reduce the risk of urolithiasis: What is new?**

Several strategies are used to formulate pet foods that decrease the risk of struvite and calcium oxalate formation. This webinar will review the existing commonly used strategies such as urine pH and Relative Supersaturation (RSS), and introduces a new method that is practical, reproducible and validated. You will learn how this new method is applied in formulating dietetic foods that help to reduce the risk urolithiasis.
